

SPON ANAL

Use

SPON ANAL is a compressed surgical haemostatic sponge, manufactured from highly purified neutral gelatine material, for use in anorectal surgery.

General Description

SPON ANAL is used during anorectal surgical procedures, when the standard haemostatic procedures can not be used or are difficult to apply, or in case that other absorbable materials are inopportune.

SPON ANAL absorb approximately 40-50 times its weight of water and adheres easily to the bleeding site. The uniform porosity of THD SPON ANAL guarantees a favourable haemostasis.

Technical Specifications

Diameter	30 mm
Length	80 mm
